

## DM-Spring-2020-Q5-Grade

100% (16/16)

- In the multiple linear regression, we assume that...
  - A The number of observations is much larger than the number of variables (n>>p)
  - B The number of observations is slightly larger than the number of variables (n>p)
  - C The number of observations equals than the number of variables (n=p)
  - D The number of observations is lees than the number of variables (n<p)
  - **E** It is not important
  - F I do not know
- **2.** The way of solving the problem of a large number of variables is...
  - A Subset Selection & Shrinkage (Regularization)
  - B Shrinkage (Regularization) & Maximum Likelihood estimation
  - C Dimension Reduction & OLS estimation
  - **D** I do not know
  - **E** The absence of the right answer
- **3.** The bias of an estimator (e.g. z^) equals
  - A E(z^) z
  - **B**  $E(z^2) [E(z)]^2$
  - c  $[E(z^2) E(z)]^2$
  - $D E(z^2)$
  - E I do not know
- ✓ 4. The main idea of regularization is
  - A To introduce a small amount of bias in order to have less variance.
  - B To introduce a small amount of variance in order to have less bias.
  - C To introduce a small amount of variance and bias in order to have less bias.
  - D I do not know

<b>/</b>	5.	With which function we can show regularization in R
	A	glmnet()
	В	regular()
	C	lm()
	D	glm()
	E	I do not know
<b>/</b>	6.	How the tune of any parametr can be made
	A	using Cross validation
	В	It is impossible
	C	I do not now
	D	using larger sample
	E	only having population
<b>/</b>	7.	Elastic Net is
	A	the combination of L1 and L2 regularization
	В	the combination of L2 and L3 regularization
	C	is independent from other types of refularization
	D	I do not know
	E	not a type of regularization
<b>/</b>	8.	Regularization is used only for
	A	Poisson Regression
	В	Linear Regression
	C	Logistic Regression
	D	any regression
	E	I do not know
<b>/</b>	9.	Regularization can solve the problem of
	A	heteroscedasticity
	В	multicollinearity
	C	autocorrelation
	D	I do not know

<b>/</b>	10.	As a result of regularization, we will have
	A	smaller slope than in case of OLS
	В	larger slope than in case of OLS
	C	the slope remains the same
	D	I do not know
<b>/</b>	11.	The ridge coefficient estimates shrink towards zero
	A	when lambda increases
	В	when lambda decreases
	C	when lambda = 0
	D	I do not know
<b>/</b>	12.	Which one can shrink the slope all the way to 0?
	A	Lasso
	В	Ridge
	C	Regression
	D	I do not know
<b>/</b>	13.	When lambda = 0, we have
	A	Ridge
	В	Lasso
	C	EL
	D	Regression
	E	I do not know
<b>/</b>	14.	When alpha = 0, we have
	A	Ridge
	В	Lasso
	C	EL
	D	Regression
	E	I do not know

- Which function can help to perform cross-validation for regularization in R?
  cv.glmnet()
  cros\_val()
- ✓ 16. Why we use set.seed() in R?

c glmnet(method = "cv)

**D** I do not know

- A To have universal result
- B To perform better result
- c To have random models
- **D** I do not know
